

▶ Data Protection and Management for Invisible Infrastructure

FLEXIBLE, OPTIMIZED DATA BACKUP, RECOVERY AND ACCESS

You want infrastructure that just works. Nutanix delivers invisible infrastructure, converging server, storage and virtualization into a turnkey appliance. The rise of this new architecture brings with it the need for next generation data protection and management. Commvault delivers the innovative data and VM backup, recovery and archiving that aligns to this new wave of IT. When you select Commvault to protect your data and enterprise applications running on Nutanix, you will get a deeply integrated solution that contains the flexibility you need to deliver custom-fit SLAs for recovery and easy access, the efficient data movement and storage you need to maximize value across your environment and the understanding of data that will allow you to search and activate your data to get more value from it.

▶ Commvault's converged data management approach ensures you get full value out of your Nutanix "invisible infrastructure" whether you choose VMware, Hyper-V or Acropolis for your hypervisor.

THE AUTOMATED AND APPLICATION-AWARE CAPABILITIES THAT A MODERN, SCALABLE, PRIVATE CLOUD DESERVES.

- Stay on-line with Commvault IntelliSnap® technology by collapsing backup windows and accelerating restores through easy to use snapshot management without scripting for VMware, Microsoft Hyper-V and Acropolis hypervisors
- Protect everything, automatically, at the right policy level – even VMs you didn't know were created, physical servers, and data in off-premise cloud providers
- Scale-out without re-architecting, without adding external appliances, all while eliminating redundant data
- Use a single console for all systems, policies, reports
- Ensure application consistency across a wide range of virtualized applications, including Microsoft SQL Server, Exchange and SharePoint, Oracle, SAP and more
- Simplify how you run Disaster Recovery and test/dev processes

WORKLOAD PORTABILITY ACROSS HYPERVISORS, SYSTEMS, AND CLOUDS THAT LETS YOU EASILY OPTIMIZE FOR COST, PERFORMANCE, AND LOCATION.

- Go faster by immediately migrating workloads from any source – physical or virtual, into the Nutanix environment
- Optimize costs by seamlessly leveraging the most appropriate hypervisor – risk and effort free.
- Eliminate risk of changing platforms, because backups from one hypervisor can be restored onto another

SELF-SERVICE EXPERIENCE OF A PUBLIC CLOUD, WITH THE CONTROLS OF YOUR OWN DATACENTER.

- Extend self-service VM consoles to end users so they can create, start / stop, and manage their own VMs across multiple hypervisors and public clouds. Self-service restores give them full control of their environment
- Control cost, configuration, and compliance with provisioning capabilities that include limits on size, number, configuration, and expiration date, by role
- Maintain high service levels by safely and automatically archiving abandoned VMs, with instant restore capability

Cloud on Your Terms: Avoid Vendor Lock in and Take Control of Your Data

This paper shares how you can create real-world workload portability, today

BETTER PROTECTION. FASTER RECOVERY. VALUE FROM DATA.

Together Commvault and Nutanix are enabling the next generation of enterprise datacenters. Learn about a simpler and truly innovative way to protect, access, comply and share data – activating your data as a strategic asset, and elevating your IT.

- Reduce datacenter infrastructure complexity, costs, and footprint
- Run and protect all enterprise applications with a single, turnkey solution
- Accelerate time to value of your infrastructure investments
- Ensure application-aware data protection for all hypervisors
- Deliver data portability across hypervisors and clouds
